

Production Tech Scout Checklist

Questions to answer before a Phuket location booking is confirmed.

Access and flow

Where do crew, talent, client and deliveries arrive? Mark loading, holding, catering, make-up, wardrobe, quiet zones and emergency access.

Power

Ask for circuit locations, available capacity, equipment draw, cable routes and whether air-conditioning or catering changes the load plan.

Light and sound

Walk the key frames at the planned time. Note sun direction, rain cover, reflective surfaces, traffic, neighbours and dialogue constraints.

Data and communications

Test your actual upload requirement if it is mission-critical. Plan two local backups; connectivity is an additional copy, not the only archive.

Permissions

Separate private-property consent from drone, public-space, commercial or other production approvals that may apply to your project.

Written confirmation

Record the final approved scope, spaces, hours, people, equipment, parking, damage process and escalation contact.

Use this document to prepare a clear brief. It does not replace the project-specific booking agreement, technical recce or any permits your production may require.
